

Dataset Type C: 2 Non-SLS & Non-Concentric Classes

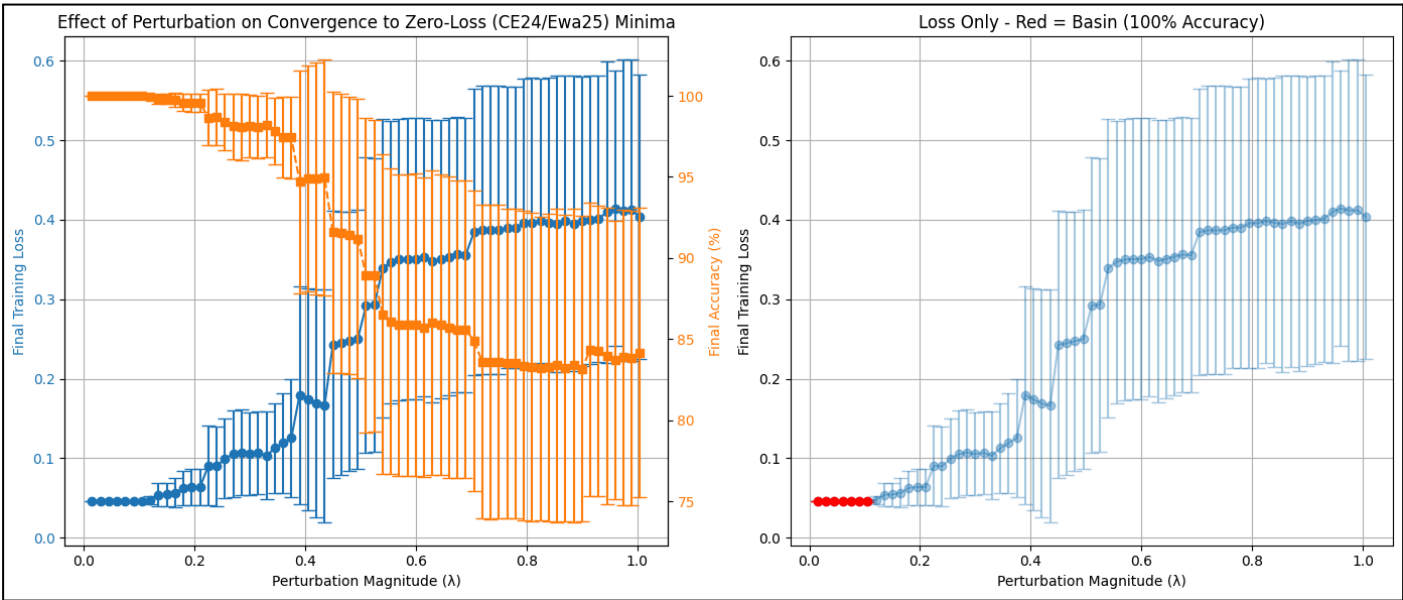

Zero Loss Construction Accuracy + Layer View:

Construction accuracy (analytic CE24/Ewa25 initialization): 100.00%, loss=0.00000

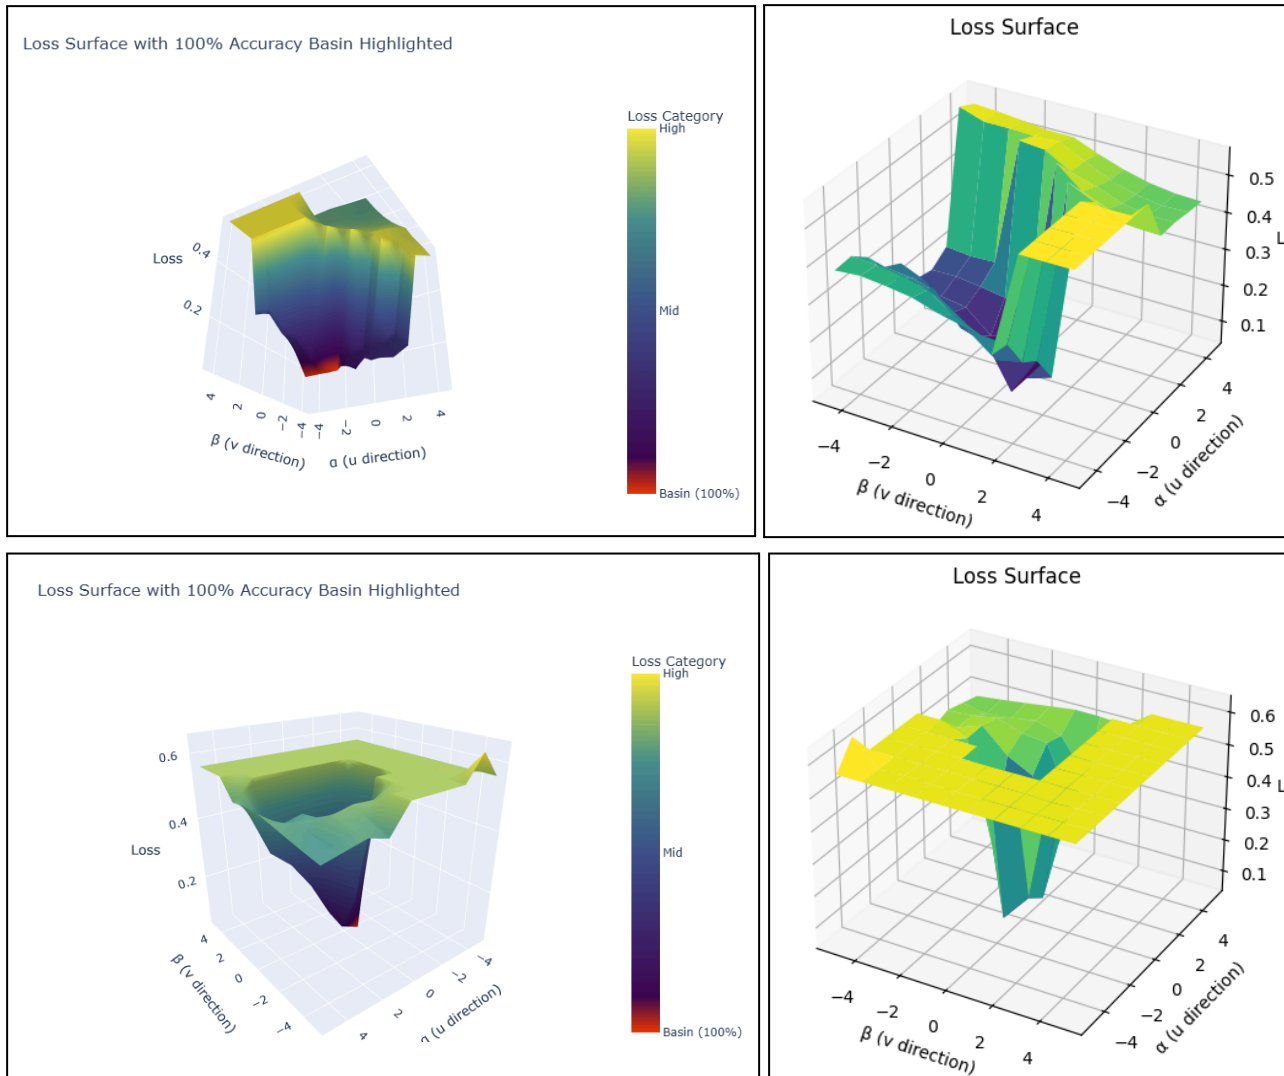

Perturbations using only Lambda in a 2D space:

Perturbations using alpha and beta in a 3D space:

Below are two sample runs, [rows] independent of each other, this is just to show variety.

The plots above clearly shows there is a stretch of 'red' where the loss flows back to 0 before blowing up; meaning there exists a margin of safe initialization around the constructive solution
